## DETAILED ACTION

### *Claim Objections*

Claims 11 and 15 are objected to because of the following informalities: There appears to be typographical errors in the claims, such as in claim 11, line 18, "arrange" should be arranged and in claim 15, line 2, "manger" should be manager.

Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 11-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

3. Claim 11 recites the limitation "said status buffer means.... for providing a corresponding time status value." There is no support in the specification for this feature.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2611

5. Claims 11-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 11, claim 11 recites the limitation of feeding the two buffers with said data in an "alternating two-phase manner." There is no direct antecedence in the specification for "alternating two-phase manner" as claimed and there is no defined term in the art for this phrase. Consequently, the metes and bounds of this limitation cannot be determined. As best understood by the examiner, the "alternating two phase manner" will be interpreted as a method of filling and reading buffers like that disclosed on page 13, lines 7-14.

Art Unit: 2611
